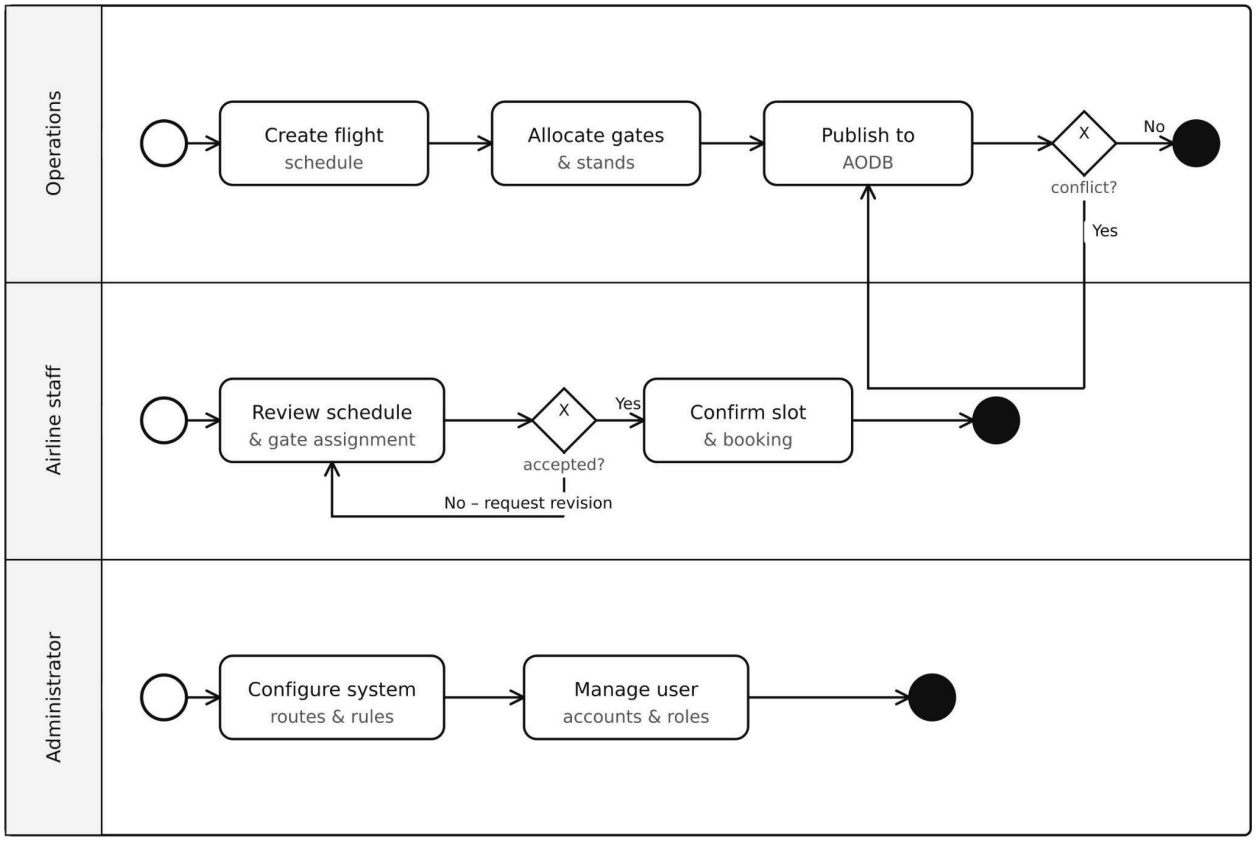
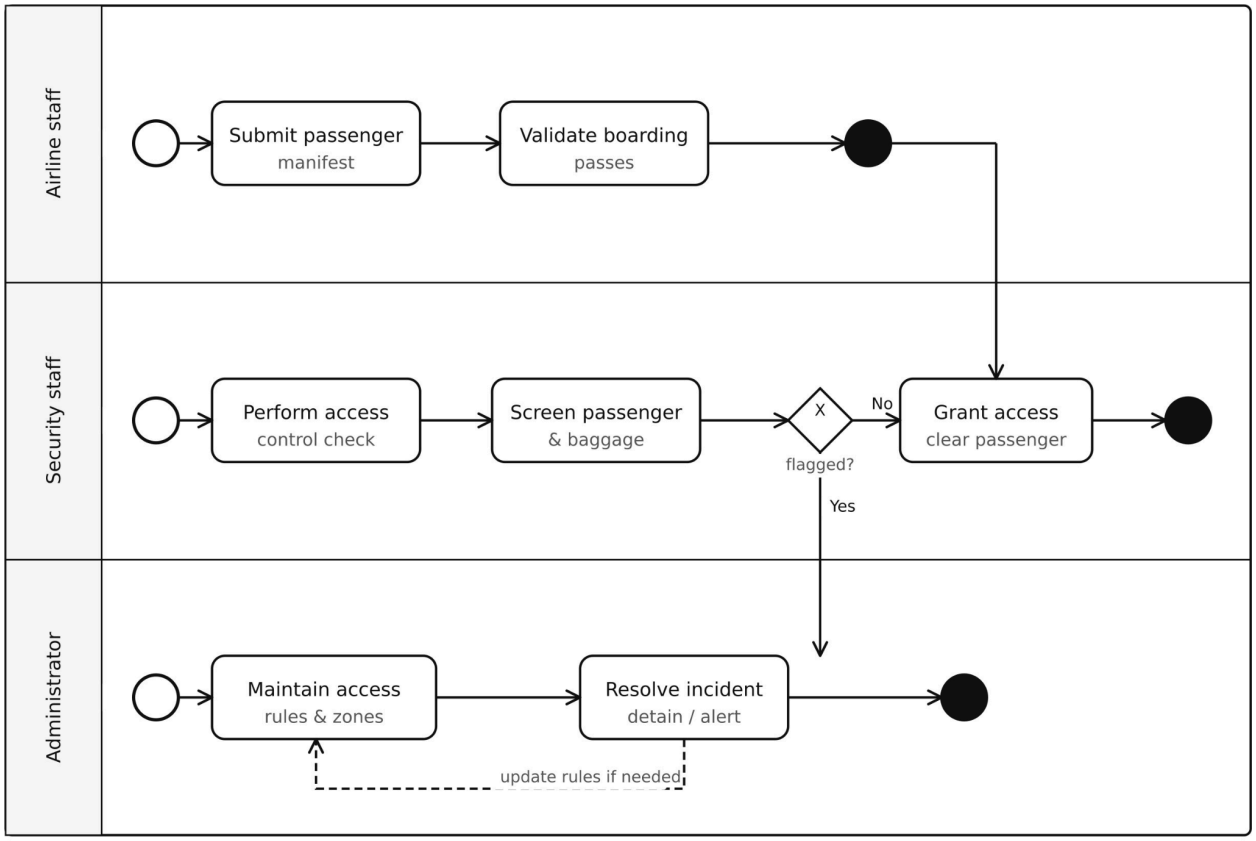
BPMN-Diagramm

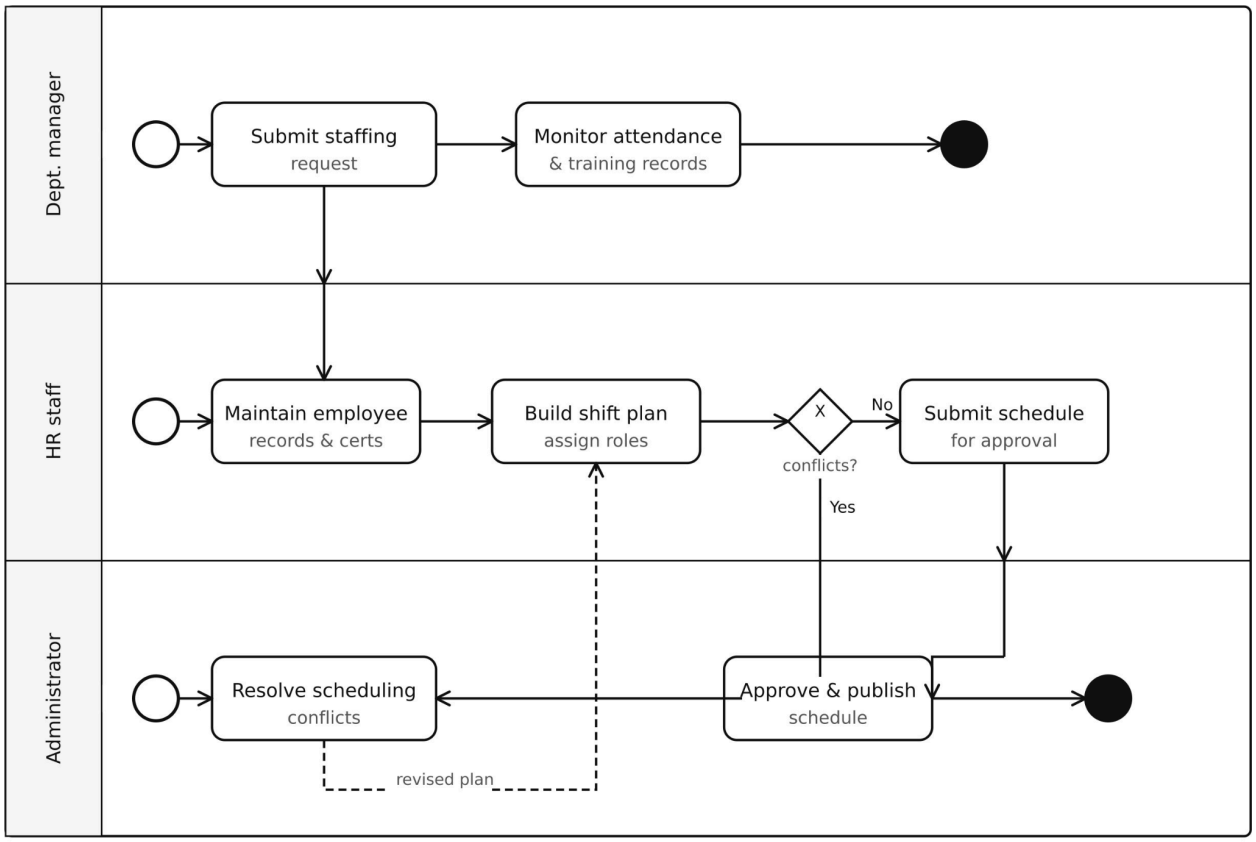
Flight Scheduling.
Flight scheduling & gate allocation has three swim lanes: Admin configures the system and manages user roles; Operations Staff creates the schedule, allocates gates, and publishes to the AODB; Airline Staff reviews and confirms slots, with a conflict loop feeding back to Operations.



Security Screening

Security screening runs across Airline Staff (submitting passenger manifests and validating tickets), Security Staff (access control, screening, and approving/flagging passengers), and the Administrator (maintaining security rules and resolving flagged incidents).



Staff Scheduling


Staff scheduling & HR management shows Department Managers submitting staffing needs and monitoring attendance, HR Staff building the shift plan, and the Administrator resolving scheduling conflicts and publishing the final approved schedule.
